Award for mousetraps that are both efficient and conforming to animal rights

St Gallen, 23 February 2021. If mice begin to multiply in the house, immediate control is required as the rodents cause extensive damage and can even endanger our health. More and more people attach great importance to sparing animals unnecessary suffering, so they seek efficient solutions that conform to animal rights. The quality company from Switzerland, SWISSINNO, has some important news in this regard.

The company was recently awarded the "Blue Angel" eco-label for two innovative and effective products for combating mice. These products are the PRO SuperCat mousetrap and the No See No Touch mousetrap. Both passed all tests and therefore earned the eco-label. This is a well-deserved honour, thanks to many years of commitment to pest control systems conforming to animal rights.

Natural control of mice, without poison

If you want to catch mice or fight a mouse plague quickly and effectively while conforming to animal rights, you don't need toxic chemicals or cheap mousetraps, but rather high-quality products that have been extensively tested and verified. SWISSINNO mousetraps are the best option in this regard, precisely because the requirements have increased in recent years. It is no longer just a question of killing the animal, but also of doing so in the most efficient and environmentally conscious way while conforming to animal rights. Not every mousetrap meets these requirements convincingly, which is why it is advisable to pay attention to both the ethical conditions and the offered quality when choosing appropriate products.

Therefore, products that have been awarded seals such as the "Blue Angel" are an interesting option. The environmental label of the German Federal Government guarantees that awarded products must meet the stringent requirements in terms of usage, health, and environmental properties. In the case of mouse traps, criteria such as effects conforming to animal rights (time required for the killing process) and good performance must be considered. The level of performance is indicated by the percentage of mice attracted within a maximum of seven days. To receive a seal like the "Blue Angel", important criteria must be met.

Mousetraps conforming to animal rights: PRO SuperCat and No See No Touch

Both the PRO SuperCat and the No See No Touch are mousetraps that are convincing in terms of their efficiency, while at the same time enabling rodent control that respects animal rights. The PRO SuperCat is based on a patented "easy catch system" and the optimised efficiency of its striking power prevents missed catches. The main focus of the No See No Touch mousetrap is the ability to get rid of mice without ever having to see them. The mouse is lured into the trap, where it is killed reliably without you seeing any of it. With both mousetraps, the mice can be disposed of at the push of a button. This eliminates the need for direct skin contact.

Both of the traps mentioned use a natural bait, which attracts the animals, and is an environmentally friendly alternative to other baits. This is another advantage that ensures the environmentally conscious and sustainable use of the mousetraps. In all cases, traps are ideal for anyone who suffers from a mouse infestation and is looking for an efficient solution for combating the animals in a species-appropriate manner and without unnecessary suffering.

SWISSINNO continues to set standards for the future

The "Blue Angel" is not the first award for the innovative company, SWISSINNO, and it will not be the last. Furthermore, great importance is attached, not only to complying with current standards, but also to setting new standards. With SWISSINNO, pest control will continue to be significantly more efficient, environmentally friendly and conforming to animal rights. According to the motto of the company philosophy: "We protect what you love".
